SEPTEMBER 1989

Residential, commercial and electric generation sales increased while industrial sales decreased in September 1989 compared with last year. Total utility sales were up from 526.8 trillion Btu in September 1988 to 546.0 trillion Btu in September 1989. Transportation volumes to end users were up 22.2 percent compared with last year.

[1]Gas volumes are based on, and the percent change is a function of, the 69 sample companies whose sales constitute about 58% of total gas utility sales to ultimate consumers. The peak year in total sales for the gas utility industry occurred in 1972.

[2]1989 forecasts for the residential and commercial sectors are based on available 1989 monthly data with the remaining months derived by using a four year average. The industrial sector forecast (industrial only, electric generation, and transportation) is also based on available 1989 monthly data with the remaining months of 1989 heavily weighted by last years volumes with no adjustment made for degree days.

[3]Carriage volumes determined by using a simple straight expansion of sample data to represent the total gas utility industry. Carriage volumes for ultimate consumers are volumes owned by the ultimate consumer but delivered to another transporter, not the ultimate consumer, and are therefore broken out to eliminate double counting of volumes delivered to ultimate consumers.
